SUMMARY

Detail-oriented business analyst with experience in project management, data analysis, process improvement, and requirement gathering. Skilled in translating stakeholder needs into actionable specifications, supporting cross-functional teams, and driving operational efficiency through analytical insights and documentation. Eager to leverage business expertise in data-driven decision-making, reporting, and process optimization to support client objectives and project success.

WORK EXPERIENCE

Business Analyst, Arikkan Inc.

June 2024 - Present

- Collaborate within an Agile software development environment to deliver iterative solutions aligned with stakeholder needs.
- Facilitate collaboration with key stakeholders, including Mississippi Secretary of State's office, to elicit, document, and prioritize business requirements, ensuring alignment with client objectives and supporting data-driven process improvements to state's election management systems.
- Lead requirement-gathering meetings, translating complex client needs into clear, actionable specifications for development teams, while incorporating data analysis to identify opportunities for efficiency gains.
- Collaborate with development teams to implement requirements, providing clarification, feedback, and reporting on progress to maintain solutions that meet functional standards and business goals.
- Support quality assurance testing by validating deliverables against requirements, contributing to reliable software deployments and generating reports on performance metrics.
- Create user stories, streamline process flows, and manage documentation to enhance clarity and efficiency throughout the software development lifecycle, focusing on operational improvements.
