SUMMARY

Results driven business analyst with hands-on experience leading software implementation projects in Agile environments. Skilled at coordinating cross-functional teams and translating customer requirements into actionable delivery plans. Strong background in web-based application development and stakeholder collaboration, with a proven ability to drive successful deployments that meet business and technical objectives.

WORK EXPERIENCE

Business Analyst, Arikkan Inc.

June 2024 - Present

- Manage end-to-end implementation of statewide Election Management Platforms in an Agile software development lifecycle, managing iterative delivery from requirements definition through testing, deployment, and handover to ensure reliable, on-schedule system launches.
 - Partner closely with stakeholders to elicit, prioritize, and document customer needs, defining technical requirements and delivery scope to align solutions with business goals.
 - Developed and maintained individualized project timelines, milestones, and resource coordination plans to drive progress and maintain alignment across internal development, IT, and client teams.
 - Lead requirement-gathering meetings, translating complex client needs into clear, actionable specifications for development teams.
 - Monitored implementation progress, identified risks and bottlenecks, and adjusted plans proactively to protect timelines, quality, and customer satisfaction.
 - Support quality assurance testing by validating deliverables against requirements, contributing to reliable software deployments and generating reports on performance metrics.
-

KEY SKILLS

- Project Management & Implementation
 - Agile Methodologies
 - SQL, Excel, Tableau
 - Web Development
 - Project documentation
 - Cross-functional collaboration
 - Creating documentation
 - Problem solving
